

USTREAM iOS SDK

Enterprise Pro Broadcasting

Great apps should leverage the most powerful platforms available. For video, Ustream provides an iOS SDK that allows app developers to seamlessly integrate live and recorded video feeds into a fully custom app experience.

iOS 7 compatible

...and constantly evolving to ensure the latest iOS compatibility.

Live and recorded video

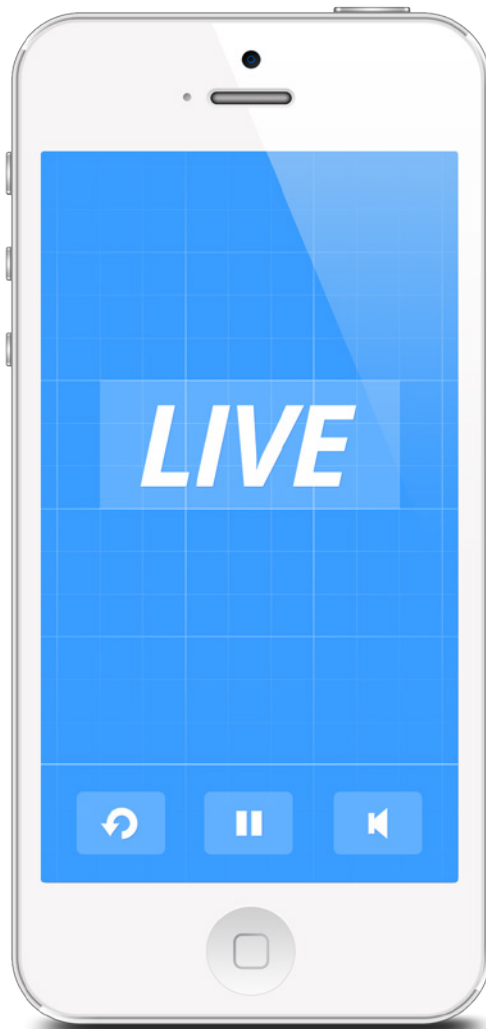

Enable live content, recorded videos and highlights.

Custom player controls

Decide upon the size and location of the standard iOS player controls, or implement an entirely new set of custom player controls.

Advanced security

Enforce player access with passwords, age gates and even IP/geo limitations.

Multi-task

Play video in the background while browsing through other apps.

Localization

Increase your global reach with support for English, Spanish, Japanese, Korean.

Multi-screen compatibility

Play videos on your Apple TV via AirPlay with the tap of a button.

Support

Tap into an expert knowledge base. The Ustream mobile app developer team will help you reach your implementation goals.

The iOS SDK is available as an optional feature for customers of the Enterprise Pro Broadcasting service.
